

Spike Puzzle

Hedgehog numbers are in decline. This is thought to be for a variety of reasons, of which habitat fragmentation is a cause. When hedgehogs need to move around we are sure it must feel like a puzzle to them, trying to put the pieces of different habitats together and find a link. Below we have two sets of puzzles for you to have fun putting together.

Large puzzle: If you've played our spot the hedgehog game you will realise this is the same picture. Put the pieces together to create the image

Hedgehogs: You can place these face up and then put them together to make individual puzzles or you can use them in a similar way to the memory game. You do this by placing them upside down and flipping two each go. If you've made a match, put your puzzle together. You can play alone with a timer or with someone else racing to see who can put together the most puzzles.

FUN FACTS!

Hedgehogs are tiny but mighty creatures. It is thought they can move around 2 to 3 km in just one night. Why not take out a map and see how far 3 km would take you from your house, how long do you think this would take you? What if there was a problem with the roads and they were blocked?
